Another forum post and then I swear I'll take a break!!! I would like to build a kind of secret box where access will be available through some sort of electronic key. Multiple specifications: (1) the box will be permanently out of the doors, and (2) the key will be simple enough that I could give the stakeholders a scheme and tell them to make one. I think the usb connection will be natural, but I'm not an electronics person, so I'm open to all offers. Thank you!!!! The key factors in the success of the electronic industries are mainly related to the demand for technological production. Providing comfortable and reliable working conditions for employees, electronic companies manage to maintain stable production and successful talent management. Technology manufacturers have also globalized the assembly of goods by setting up manufacturing plants in countries with cheaper labour and thus generating more revenue from sales. The society has demanded technological production for the past few decades. Since the invention of computers, the electronics industry has tried to respond effectively to such demand by providing technology products to customers. A good example is the mobile sector - after the advent of the first mobile phones, the public demanded more innovative devices. This led to the invention of color displays and integrated cameras, as well as business applications in mobile devices. Competition is the driving force behind every production because, by competing, companies are coming in with more and more innovative technological products. This is evidenced by the success of the electronics industry. A report by leading IBM technology experts, for example, indicates that competition between Japanese electronics companies and Western corporations has made the industry more attractive and incorporated more advanced technologies. Competition between, for example, Sony and Microsoft led to the distribution of two of the most successful game consoles - PlayStation and Xbox. E-industry offers some of the most attractive employment opportunities in terms of environment and labor. The journal EHS Today concludes that by providing comfortable social conditions and especially raising the salaries of technology professionals in developed countries, the electronic industries have become a sought-after employer for educated people. This gives technology companies the opportunity to manage talent in their organizations and enjoy the progressive work of professionals. Many U.S. and European tech giants have successfully exported their production abroad. Such companies have assembly plants in Asia and pay less for production resources and labor costs. Experts from the Warwick Institute for Employment Studies have concluded that such companies receive such a level of product quality from their employees and pay less for their work. In this way, industries can save costs and revenue and product quality. For example, organizations such as Intel and Nokia have their own assembly plants in countries such as Thailand and China, where labor costs are lower than in the United States. Before your teen leaves home, they need to know how to create a budget, how to track costs, and how to save for the future. While budgeting may seem like a hassle for some teens, studies show that young people who have good financial habits early on often grow to be financially responsible adults. You can help your teen strengthen their budgeting skills with these tips from Tiffany 'The Budgetnista' Aliche, founder of CLD Financial Life:1. Create a list of money - Sit down with your teen and create a list of everything they consume regularly. Aliche says that cash lists allow young people to get a physical picture of their money and all and all of their spending habits. At the top of the money list is to have them write down their monthly income.2. Next, go through the list and write down how much they spend on their expenses, which may include their bills, meals, entertainment, clothing and school supplies.3. Finally, they add up all the items on the list and subtract it from the available resources and then they will have an idea of how much they are left to spend on other things or better yet save! Once they have compiled this list and realize that each expense costs, they will be able to plan their expenses. You can do this by writing it down in a notebook or using a spreadsheet such as Microsoft Excel or Google Sheets. From there you can continue to talk about the importance of budgeting. Here are some basics for budgeting that you can share with them. It is important that the young man sees where their money comes from and where they concede. Within a month, your teen has a record of each purchase so they can better visualize their expenses. According to the American Institute of Certified Accountants, showing your child how to save and calculate receipts is one way to help them keep their spending back on track. Will they spend money from monthly allowance, financial aid or wages from their work? Help them understand the importance of planning. They write down their monthly expenses like rent, laundry, meals and monthly bills. Talk to them about unforeseen or extraordinary expenses and the prudence of setting up a security savings account. When it comes to cash habits, Aliche says: There is no barometer for teens, so normalize good money habits for them. Budgeting is a tool and if you show them how you use it usually it will become second nature to them too. She says when it comes to money behaviors children take their cues from their parents; be a good example of healthy financial habits The best training you can provide. Several ways to do this can be paired with financial lessons with what is important to them and make your bills in front of them. Another key component Saves. When young people save, Aliche says it helps them build on the path to wealth. A useful way to do this is to create spend, save and give accounts. Interest from the money that your teen saves can be deposited into their bank account, invested, donated or spent on their financial duties and entertainment. Aliche recommends the following interest allocations for deposits on each account: Savings and investment - 20% of their income should be deposited into their savings account on a rainy day, a big ticket item, vacation, or a venture they would like to invest in. like bills, food and toiletries. Once they have handled their business they can relate to themselves. While your teen's obligations and responsibilities may change, specifying interest rates for their money is a great way for them to stay on track. Not everything has to be done on paper. In fact, there are a number of mobile apps and websites that can help with budgeting, saving, and keeping track of all your finances. These mobile apps can help your teen stay on top of their spending habits while they're on the go. Mint - has a website and mobile app that lets you create budgets, track categories, and provides personalized tips and tips about your money. The app can be linked to your bank, credit and credit accounts and updates automatically. GoodBudget - Mocks conversion budgeting. If you and your teen are splitting up some of the costs, this can be a good fit. In the app, your teen can share their budget with you with their cloud technology. Prosper Daily - Helps with budgeting and to protect credit and debit cards from fraud and error. The app links to accounts and shows the analytics from each transaction. As you and your teen plan for your finances after high school remember that you are their financial advisers and examples. What you teach them, and how you deal with your own money, will help them when they are on their own. Please note that the inclusion in this article does not reflect the endorsement of NBC News. Toolkit's parent resources were developed by NBC News Learn with the help of subject experts including Mark Cantrowitz, publisher and vice president of strategy, Cappex.com, and Sharon Sevier, Director of Advocacy, Missouri Association of School Advisors. The views expressed by entrepreneurs are their own on March 13, 2015. Whether you're running a pole-dancing fitness business or an online Etsy store, all your management efforts are sleepless really get off to three crucial questions about your business - and three crucial documents that will help you answer them: Related: How long do you really have to keep your financial documents?1. Do you make a profit? (Consult your net profit statement.) Profit measured in one place: your net net Statement. Net revenue, which is usually the same as net sales, does not give the whole story because it does not take into account all the direct and indirect costs required to run your business. For example: If you have paid your bills recently, you know that rent, utilities, insurance, accounting fees, web and technical support all cost money. Therefore, profit is what you have after deducting expenses from net sales. This calculation generates the net income of your business. Is it positive this month? Then you make money. Good deal. But did you know you could show profit and still be bankrupt? Knowing whether you are making money is not enough; that money should be converted into cash. What is your money situation? (Consult your cash flow statement.) Cash is the lifeblood of your business. In an ideal world you pay the bills of cash generated from operations, not debts. If you want to maintain financial sanity. To pay in cash, your small business should start enough to cover the bills. Do you have enough cash to cover expenses for at least 90 days? You will find out by looking at your cash flow statement. Remember that cash for your business is like blood for your body; without it, your business is dying. Cash comes when customers pay you. But sometimes they don't pay the full retail price because of discounts or third parties like PayPal who take a percentage of the deal. Just because you take X doesn't mean you'll collect X when you make a sale. Sometimes there is also a time difference between when you complete a project and when you are paid. This is common in some service companies, but it needs to be carefully managed; otherwise, you'll just have an expensive hobby rather than a business. Related: How best to manage cash flow?3. Do you build or destroy wealth? (Consult your balance.) Building a terminal is a matter of why you are in business. The terminal cost is that you could sell the business if you decided to do so today. If you're a small business owner, what's the long game? It's just about grinding through 12-16-hour days for decades only to retire when a doctor tells you? Or is it about imitating sharks on abc's shark tank, which must be so rich? They built businesses that grew assets faster than liabilities - much faster. In some cases, they sold their businesses; in others they used the business as collateral to attract venture or start-up money for new ventures. It's an amazing system when it works. So, what about your business? Do you have a small business you could sell after all? Your balance is crucial here. It measures your assets, liabilities and equity or the net value of the business. This is not the only indicator of value, but it contains valuable information every banker and investor wants to know. This is the first step in determining the terminal value. Do you know how to read your net profit, cash flow statement and balance sheet? In my 20 years in business, I've seen how clear that if you don't these documents, you leave a huge potential for profit and cash flow on the table. Your small business also probably carries a much greater risk of failure than you know. Would you drive a car with your eyes closed? No way, right? So don't run your small business without knowing how to answer these three key questions. Finding answers is easier than you imagine. And these answers can change your future.
